S4710

Probe card adapter

Signatone's S-4710 Probe Card Adapter is designed to be used with most of Signatone's vast family of probe stations, for most applications that require a probe card.

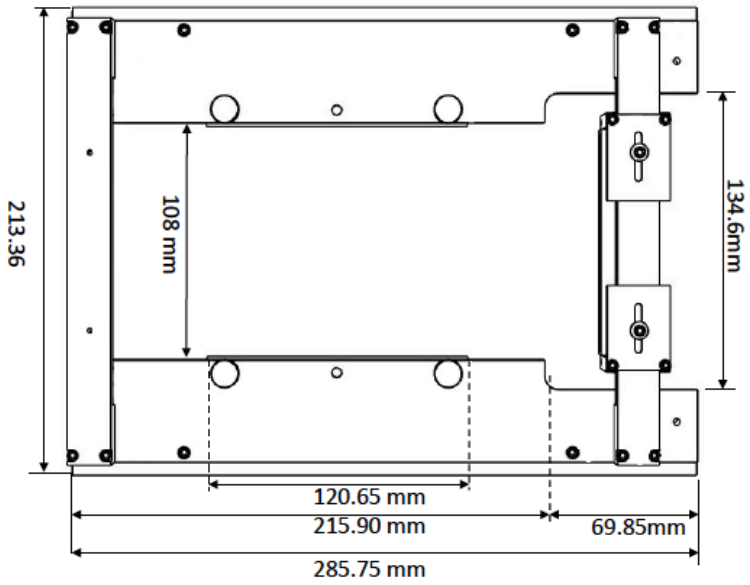

The S-4710 will hold a probe card made by your choice of probe card manufacturer with the industry standard width stated as 4.5 inches wide and less than 12 inches long. The S-4710 slides into the existing channel machined in your Signatone probe station platen.

Simply slide the S-4710 into the notch that was pre-machined in the platen, tighten the thumb screws to lock the S-4710 in place, then slide your probe card between the clamps and tighten the thumbscrews to firmly hold your probe card in place. The S-4710 includes bracket for mounting edge connector.
